

C O N T E N T S

1	<i>Introduction</i>	
	Welcome to Building Geodatabases	1-1
	Course objectives	1-2
	About the projects	1-3
	Day 1 course content	1-4
	Day 2 course content	1-5
	Day 3 course content	1-6
	Course materials	1-7
	Additional resources	1-8
	ESRI Support Center	1-9
	ArcGIS: a complete GIS	1-10
	Logistics	1-11
	Introductions	1-12
	Exercise goals	1-13
2	<i>What is a geodatabase?</i>	
	What is a geodatabase?	2-1
	Learning objectives	2-2
	Defining the geodatabase	2-3
	Advantages of geodatabase	2-4
	Geodatabase elements	2-5
	Feature classes	2-6
	Feature datasets	2-7
	Relationship classes	2-8
	Geometric networks	2-9
	Geodatabase topology	2-10
	Geodatabase tables	2-11
	Rasters in the geodatabase	2-12
	Geodatabase behavior	2-13
	Geoprocessing	2-14
	Extending the geodatabase	2-15
	Exercise goals	2-16
	Lesson review	2-17
3	<i>Types of geodatabases</i>	
	Types of geodatabases	3-1
	Learning objectives	3-2
	ArcGIS Desktop geodatabases	3-4
	Geodatabases employing ArcSDE technology	3-5
	File geodatabase	3-6

Advantages of file geodatabase	3-7
File geodatabase storage	3-9
Storage requirements (uncompressed)	3-10
Compressed file geodatabase (read-only)	3-11
Compression	3-12
Compact versus compression	3-13
Migrating to file geodatabases	3-14
Migration considerations	3-15
ArcGIS Desktop licensing	3-16
Instructor-led demo	3-17
Exercise goals	3-18
Lesson review	3-19
4 <i>Subtypes and domains</i>	
Subtypes and domains	4-1
Learning objectives	4-2
Geodatabase behavior	4-3
Subtypes	4-4
Advantages of subtypes	4-5
Is your data subtype ready?	4-6
Adding and calculating integer fields	4-7
Using subtypes	4-8
Domains	4-9
Types of domains	4-10
Advantages of domains	4-11
Domain examples	4-12
Creating domains	4-13
Applying domains to fields	4-14
Modifying domains	4-15
Subtypes and domains	4-16
Applying domains to subtypes	4-17
Exercise goals	4-18
Lesson review	4-19
5 <i>Relating spatial and attribute data</i>	
Relating spatial and attribute data	5-1
Learning objectives	5-2
Cardinality	5-3
ArcMap joins and relates	5-4
What is a relationship class?	5-5
Advantages of relationship classes	5-6
Important considerations	5-7
Choose origin and destination tables	5-8
Types of relationship classes	5-9

Simple versus composite relationships	5-10
Relationship class properties	5-11
Common fields	5-12
Relationship rules	5-13
Relationship rules	5-14
Using relationship classes in ArcMap	5-15
Exercise goals	5-16
Lesson review	5-17
6 <i>Editing using attribute validation rules</i>	
Editing using attribute validation rules	6-1
Learning objectives	6-2
Editing using subtypes	6-3
Editing using range domains	6-4
Validating range domains	6-5
Editing using coded value domains	6-6
Editing with relationship classes	6-7
Editing records in a relationship class	6-8
Adding records to destination table	6-9
Exercise goals	6-10
Lesson review	6-11
7 <i>Geodatabase annotation</i>	
Geodatabase annotation	7-1
Learning objectives	7-2
Labels and annotation	7-3
Geodatabase annotation	7-4
Feature-linked annotation	7-5
Creating annotation	7-6
Advantages of geodatabase annotation	7-7
Preparing labels for conversion	7-8
Convert labels to annotation	7-9
Annotation classes	7-10
Unplaced geodatabase annotation	7-11
Creating annotation feature classes	7-12
Importing annotation into a geodatabase	7-13
Editing annotation	7-14
Exercise goals	7-15
Lesson review	7-16
8 <i>Geodatabase topology</i>	
Geodatabase topology	8-1
Learning objectives	8-2

Topology in maps	8-3
Topology in the geodatabase	8-4
Coincident geometry	8-5
Real-world examples	8-6
Geodatabase topology	8-7
Advantages of geodatabase topology	8-8
Topology considerations	8-9
Using the cluster tolerance	8-10
Ranks	8-11
Topology rules	8-12
Some commonly used topology rules	8-13
Dirty areas	8-14
Validating a topology	8-15
Topology errors	8-16
Managing errors	8-17
Displaying in ArcMap	8-18
Topology workflow	8-19
Map topology	8-20
Exercise goals	8-21
Lesson review	8-22

9 *Editing using geodatabase topology*

Editing using geodatabase topology	9-1
Learning objectives	9-2
Topology editing workflow	9-3
Geometric elements of a topology	9-4
Editing within a topology	9-5
Editing coincident geometry	9-6
Using topology edit tasks	9-7
Creating polygons from lines in ArcMap	9-8
Converting feature classes	9-9
Fixing topology errors	9-10
Common error fixes	9-11
Special topology rule	9-12
Exercise goals	9-13
Lesson review	9-14

10 *Geometric networks*

Geometric networks	10-1
Learning objectives	10-2
Geometric networks	10-3
Storing a geometric network	10-4
Features with roles	10-5
Geometric networks in a geodatabase	10-6

Two views of a network	10-7
Edges and junctions	10-8
Simple junctions	10-9
Orphan junctions	10-10
Simple edge	10-11
Complex edge	10-12
Connectivity rules	10-13
Special fields	10-14
Network analysis	10-15
Flags and barriers	10-16
Exercise goals	10-17
Lesson review	10-18

11 <i>Creating geodatabase schemas</i>	
Creating geodatabase schemas	11-1
Learning objectives	11-2
What is a schema?	11-3
Schema editing versus feature editing	11-4
Spatial reference properties	11-5
Spatial domain	11-6
Resolution	11-7
Tolerance	11-8
High-precision coordinates	11-9
Building a geodatabase schema	11-10
Building a schema with ArcCatalog	11-11
Building a schema by importing	11-12
XML data interchange	11-13
Exporting geodatabase schema to XML	11-14
Building a schema with data models	11-15
Building schema with geoprocessing	11-16
Field data types	11-17
Exercise goals	11-18
Lesson review	11-19

12 <i>Loading data into a geodatabase</i>	
Loading data into a geodatabase	12-1
Learning objectives	12-2
Geodatabase data sources	12-3
Data loading methods	12-4
Conversion tools	12-5
ArcCatalog simple data loader	12-6
ArcMap object loader	12-7
XML import options	12-8
ArcToolbox Append tool	12-9

Using copy/paste and drag/drop	12-10
Which vector loading method is best to:	12-11
Fundamentals of raster data	12-12
Raster bands	12-13
Loading raster data	12-14
Raster datasets	12-15
Raster catalogs	12-16
Raster attributes	12-17
Raster storage considerations	12-18
Raster pyramids	12-19
Exercise goals	12-20
Lesson review	12-21

13 *Geodatabase workflow*

Geodatabase workflow	13-1
Learning objectives	13-2
Geodatabase workflow	13-3
Project 13A: Work with attribute behavior	13-4
Project 13B: Work with geometric networks	13-5
Project 13C: Work with cadastral data	13-6
Exercise goals	13-7
Project wrap-up	13-8
Lesson review	13-9

14 *Course conclusion*

Course conclusion	14-1
Course objectives	14-2
ESRI educational support	14-3
Where do you go from here?	14-4
Learning pathways	14-5
Course evaluation	14-6
Thank you for attending	14-7
